
ratio raised
(above each curve)
$G = 0$
(independent)
$G = 1$
$G = 4$
$G = 16$
$\phi_1 = \phi_0$
(random gate)
$\phi_1 \leq \phi_0$: ratio lowered
for every gate if $\gamma_{01} \geq 0$
ϕ_1: corrupted-token withholding probability
ϕ_0: clean-token withholding probability
